Digital Sonar

KDS-6000BB

● Advanced Broadband Technology

KDS-6000BB is world first Broadband searchlight sonar. With the broadband transducer equipped as standard, the most suitable output frequency can be selected in 0.1 kHz step depending on the fishing method and the target species from closer range to longer range. Selection of frequency is as easy and quick as tuning a radio.
Flexible frequency selection enables user to tune outside of other vessel interference frequency, providing much cleaner image.

● Clearest possible images with our digital signal processing

Both of high resolution in closer range and noise reduction performance in longer range are materialized at high level with newly-developed digital signal processing, KDP V.

● Massive improvement in scan speed

Scanning speed is remarkably increased by adding 15° and 20° in scanning sector angle steps. It can detect surrounding fish schools quickly.

● Six different presentation modes

Sonar mode

Search around the ship

Off-center mode

Show more information of ahead

Sonar x 2 mode

Two different frequencies

Bottom scan mode

Reflected echo from underwater and sea bottom

Echo sounder mode

Image like Echo sounder

One line display mode

Show vertical Sonar image like an echo sounder image in the Sub-screen

● CM keys

Six of CM keys

Six of CM (Condition Memory) keys offer the user to preset all the current settings and recall them instantly. It is like six sonars in one unit.

● Black box type

KDS-6000BB comes in black box. The user can select a monitor from the market or the optional 17 / 19 inch LCD monitor

● Space-saving Hull unit

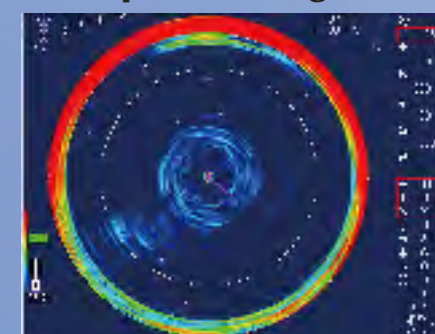

Short stroke Hull unit available for small space

● Motion sensor

The stabilizer function reduces the disturbance of sonar display caused by the pitch and roll of the vessel. (For AS model)

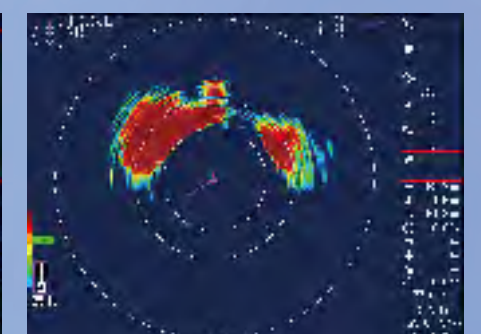

● Example of image

Spear squids at the sea bottom
at 130.4 kHz

Tunas attacking school of sardines
at 140.0 kHz

Pilchards
